

SET-Nav

Strategic Energy Roadmap

NAVIGATING THE ROADMAP FOR CLEAN, SECURE AND EFFICIENT ENERGY INNOVATION

SET-Nav supports strategic decision making in Europe's energy sector, promoting innovation towards a clean, secure and efficient energy system. Our research enables the EC, national governments and regulators to facilitate the development of optimal technology portfolios. The consortium addresses critical uncertainties and derives appropriate policy and market responses. The findings support the further development of the SET-Plan, and its implementation is fostered by continuous stakeholder involvement.

Objectives

Methodological Framework

Analyzing of the impact of multiple future policy pathways

- Making use of several complementary energy models with different methodological background, sectoral coverage and implemented modelling features

Linking models through a model integration platform and standardized interfaces

- Linking bottom-up demand side oriented models with energy system and energy supply models, the wider economy models detailed district heating expansion models, building stock models and electricity system models
